Introduction	xv
I History	1
1 Matrices and their properties	3
1.1 The birth of matrices	3
1.2 Matrix rank	12
1.3 Norms	14
1.4 Ill-conditioning and condition numbers	16
1.5 The Schur complement	24
1.6 Matrix mechanics	26
1.7 Lifetimes	29
2 Elimination methods for linear systems	33
2.1 Antiquity	33
2.2 Ancient China	34
2.3 Ancient Greece	39
2.4 Ancient India	41
2.5 Ancient Persia	42
2.6 The Middle Ages	43
2.7 The 16th century	45
2.8 The 17th century	48
2.9 The 18th century	52
2.10 The 19th century	55
2.11 The 20th and 21st centuries	67
2.12 Lifetimes	94
3 Determinants	99
3.1 The 17th century	99
3.2 The 18th century	104
3.3 The 19th century	108
3.4 The 20th century	117
3.5 Lifetimes	117
4 Matrix factorizations and canonical forms	121
4.1 LU factorization	121
4.2 QR factorization	121
4.3 Singular value factorization	134

4.4	Polar factorization	142
4.5	CS factorization	144
4.6	Jordan canonical form	146
4.7	Frobenius canonical form	150
4.8	Schur factorization	151
4.9	Spectral factorization	152
4.10	WZ factorization	152
4.11	Lifetimes	152
5	Iterative methods for linear systems	155
5.1	Classical methods	155
5.2	Alternating direction methods	178
5.3	Semi-iterative methods	180
5.4	Projection methods	186
5.5	Asynchronous methods	195
5.6	The Institute for Numerical Analysis	197
5.7	CG, Lanczos, and other methods	201
5.8	Krylov methods for nonsymmetric linear systems	217
5.9	The method of moments	246
5.10	Preconditioning	249
5.11	Domain decomposition methods	265
5.12	Multigrid and multilevel methods	268
5.13	Lifetimes	271
6	Eigenvalues and eigenvectors	275
6.1	The early years	275
6.2	The Rayleigh quotient	281
6.3	Localization of eigenvalues and the field of values	285
6.4	Where does the name “eigenvalue” come from?	288
6.5	Using the characteristic polynomial	289
6.6	The power and inverse iterations	293
6.7	Morris’ escalator method	296
6.8	The methods of Lanczos and Arnoldi	297
6.9	The methods of Givens and Householder	308
6.10	The qd and LR algorithms	308
6.11	The QR algorithm	311
6.12	Tridiagonal matrices	315
6.13	The Jacobi-Davidson method	316
6.14	Other methods	317
6.15	Books	319
6.16	Lifetimes	320
7	Computing machines	323
7.1	The beginnings	323
7.2	Logarithms and slide rules	324
7.3	Mechanical calculators	325
7.4	Electric calculators	330
7.5	The beginning of automatic computers	330
7.6	Tabulating machines	332
7.7	The early digital computers	334

7.8	The 1940s	335
7.9	The 1950s	338
7.10	The 1960s	339
7.11	The 1970s	340
7.12	The 1980s	341
7.13	The 1990s	342
7.14	The 2000s	343
7.15	The rise of microprocessors	343
7.16	Parallel computers	345
8	Software for numerical linear algebra	357
8.1	Introduction	357
8.2	Programming languages	358
8.3	The Handbook for Automatic Computing	361
8.4	BLAS	364
8.5	EISPACK	367
8.6	LINPACK	367
8.7	LAPACK	369
8.8	Other libraries	370
8.9	Commercial libraries	373
8.10	Libraries for parallel computers	375
8.11	Netlib	379
8.12	MATLAB	379
9	Miscellaneous topics	381
9.1	Tridiagonal matrices	381
9.2	Fast solvers	383
9.3	Hankel and Toeplitz matrices	385
9.4	Functions of matrices	387
9.5	Ill-posed problems	391
9.6	Matrix equations	394
II	Biographies	401
10	Lives and works	403
10.1	Alexander C. Aitken	403
10.2	Mieczysław Altman	405
10.3	Charles Babbage	407
10.4	Tadeusz Banachiewicz	410
10.5	Friedrich L. Bauer	413
10.6	Eugenio Beltrami	414
10.7	Augustin-Louis Cauchy	418
10.8	Arthur Cayley	420
10.9	Lamberto Cesari	427
10.10	Françoise Chatelin	431
10.11	Pafnuty L. Chebyshev	432
10.12	André L. Cholesky	435
10.13	Gianfranco Cimmino	437
10.14	Gabriel Cramer	440

10.15	Seymour R. Cray	441
10.16	Prescott D. Crout	445
10.17	Myrick H. Doolittle	446
10.18	Paul S. Dwyer	449
10.19	Leonhard Euler	451
10.20	Radii P. Fedorenko	453
10.21	Roger Fletcher	454
10.22	George E. Forsythe	457
10.23	Leslie Fox	461
10.24	Ferdinand G. Frobenius	462
10.25	Noël Gastinel	464
10.26	Johann C.F. Gauss	466
10.27	Hilda Geiringer	471
10.28	Semyon A. Gerschgorin	473
10.29	Wallace Givens	475
10.30	Gene H. Golub	476
10.31	William R. Hamilton	478
10.32	Richard J. Hanson	481
10.33	Emilie V. Haynsworth	482
10.34	Peter Henrici	484
10.35	Karl Hessenberg	485
10.36	Magnus R. Hestenes	487
10.37	Alston S. Householder	488
10.38	Carl G.J. Jacobi	491
10.39	Camille Jordan	494
10.40	Stefan Kaczmarz	496
10.41	Leopold Kronecker	498
10.42	Alexei N. Krylov	501
10.43	Vera Kublanovskaya	506
10.44	Joseph-Louis Lagrange	508
10.45	Edmond Laguerre	511
10.46	Cornelius Lanczos	515
10.47	Pierre-Simon Laplace	520
10.48	Charles L. Lawson	523
10.49	Adrien-Marie Legendre	525
10.50	Gottfried W. von Leibniz	528
10.51	Ada Lovelace	531
10.52	John von Neumann	534
10.53	Isaac Newton	537
10.54	Willgodt T. Odhner	540
10.55	Alexander M. Ostrowski	542
10.56	Oskar Perron	543
10.57	Lewis F. Richardson	546
10.58	Reuben L. Rosenberg	548
10.59	Heinz Rutishauser	550
10.60	Issai Schur	552
10.61	Hermann Schwarz	554
10.62	Franz Schweins	556
10.63	Philipp von Seidel	558
10.64	Richard V. Southwell	560

10.65	Philip B. Stein	563
10.66	Eduard L. Stiefel	565
10.67	James J. Sylvester	568
10.68	Olga Taussky-Todd	574
10.69	Charles-Xavier Thomas de Colmar	576
10.70	John Todd	578
10.71	Otto Toeplitz	581
10.72	Alan M. Turing	583
10.73	Alexandre-Théophile Vandermonde	589
10.74	Richard S. Varga	590
10.75	Karl Weierstrass	592
10.76	James H. Wilkinson	595
10.77	David M. Young	599
10.78	Konrad Zuse	602
