Preface	ix
1 The conjugate gradient algorithm	1
1.1 The Lanczos algorithm	1
1.2 The conjugate gradient algorithm	2
1.3 The A -norm of the error	4
1.4 Inverse of T_k	8
1.5 The ℓ_2 norm of the error	12
1.6 Riemann–Stieltjes integral and Gauss quadrature	15
1.7 MINRES and the CG residual norms	17
1.8 Estimates in finite precision arithmetic	18
1.9 The preconditioned conjugate gradient algorithm	22
1.10 Parallel variants of CG	23
2 Numerical examples I	25
2.1 bcsstk01 and its inverse	25
2.2 Prescribing the convergence curve	26
2.3 Effect of rounding errors	28
3 The CGQL algorithm	31
3.1 Introduction	31
3.2 The Gauss–Radau rule in CG	34
4 The CGQ algorithm	39
4.1 The factorization of tridiagonal matrices	39
4.2 Another upper bound	43
5 Approximation of the extreme eigenvalues	45
5.1 Estimates of norms of triangular matrices	45
5.2 Estimates of norms of bidiagonal matrices and their inverses	47
5.3 Estimates of matrix norms in CG	50
6 Numerical examples II	55
6.1 bcsstk01	55
6.2 1138_bus	56
6.3 Pb26	57
6.4 Approximation of the extreme eigenvalues	59

7	Problems with the Gauss–Radau upper bound	63
7.1	A model problem	63
7.2	Analysis	66
7.3	Finite precision arithmetic	77
7.4	Conclusion on the Gauss–Radau problem	80
8	Adaptive choice of the delay	83
8.1	The delay for the Gauss lower bound	83
8.2	The delay for the Gauss–Radau upper bound	86
9	Numerical examples III	89
9.1	bcsstk01	89
9.2	1138_bus	89
9.3	Pb26	90
9.4	bcsstk09	90
9.5	Adaptive choice of μ	93
10	Bounds and estimates of other norms	95
10.1	The relative A -norm of the error	95
10.2	The ℓ_2 norm of the error	97
10.3	Other error norm estimates	102
10.4	Estimates of error norms by extrapolation	102
10.5	Using the estimates in least squares problems	103
11	Numerical examples IV	107
11.1	bcsstk01	107
11.2	1138_bus	108
11.3	Pb26	109
	Appendix	113
	Bibliography	117
	Index	125
